

Three Year Trend of Functional Scorings

The graph below represents a visual trend of the functional debility levels of the patients served by Amedisys over the last three year period. The admission document in home care, known as the OASIS assessment, generates what is known as a functional score. Ranging from F0 (fully functional-no deficits) to F4 (potentially bed bound), this scoring gives the organization insight into how debilitated the population is on a year over year period.

Over a three year period, the organization has experienced an increasing trend of patients admitted with higher function debilities (F2 to F4) each year and at the same time a decreasing percentage of patients with small or minimal functional deficits entering the system of care (F0 to F1).
